## Programme des sessions plénières

### Opening Plenary (Chair: Irene Ring)

Hémicycle - Conseil Régional Nord-Pas-de-Calais (Lille)

*18 June, 2013 - 6:00 - 7:30 pm*

6:00 pm: **Sandrine Rousseau** (Vice-President of the Nord-Pas-de-Calais Regional Council, in charge of Higher Education and Research), *Welcome address.*

6:10 pm: **Philippe Rollet** (President of the Lille 1 University), *Welcome address.*

6:20 pm: **Irene Ring** (ESEE President), *Welcome address.*

6:25 pm: **Michel Capron** (RIODD President), *Welcome address.*

6:30 pm: **Daniel W. Bromley** (Anderson-Bascom Professor of Applied Economics - Emeritus - University of Wisconsin-Madison, USA & Visiting Professor, Humboldt University-Berlin, Germany), *Institutions and Institutionalism. Crafting a Coherent Science of Environmental Policy.*

# Institutions and Institutionalism: Crafting a Coherent Science of Environmental Policy

There are many visions of a properly constituted and motivated ecological economics. Some wish for it to embrace a broad vision—open to multiple ways of knowing, and thereby able to advance competing accounts of the vexing problems of sustainability and feasible prospects for the future of humans in their fraught interactions with nature. A second vision is that ecological economics should be a radical movement dedicated to criticizing and changing social organizations and institutions that are responsible for the spread of false beliefs about economic, social, and what is called “environmental reality.” Regardless of which vision ultimately prevails—and there are other visions that fall between these two—it is obvious that the concept of “institutions” is instrumental to realization of the desired future. This is unfortunate for the simple reason that those who appeal to institutions have never bothered to develop a consistent and coherent idea of this allegedly important concept. They just invoke the word. Institutions cannot possibly matter if those who write about them have no idea what they are writing about. Here I will spell out the core meaning of two central ideas to the future of a coherent ecological economics — institutionalism, and institutions. I will show that a clear understanding of these two related ideas will liberate ecological economists from continued angst and debate about ontology, epistemology, and methodology—and some wished-for grand theory. I predict that this liberation will be much welcomed by ecological economists who merely wish to get on with doing good science.

---

*Daniel W. Bromley is Anderson-Bascom Professor of Applied Economics (Emeritus) at the University of Wisconsin-Madison, and Visiting Professor at Humboldt University in Berlin. He has published extensively on: (1) institutional economics; (2) economic philosophy; (2) the legal and philosophical dimensions of property rights; and (4) economic development. He is listed in Who's Who in Economics. He is a Fellow of the Agricultural and Applied Economics Association, and of the Association of Environmental and Resource Economists. He has worked and lectured in over 25 countries. He was economic advisor to the Sudan People's Liberation Movement in South Sudan, and he advised the Government of National Unity in Sudan on economic recovery in Darfur. He recently served as a Senior Research Advisor to the U.S. State Department on economic recovery in Iraq.*

*Professor Bromley has written and edited thirteen books, the most recent of which are: Sufficient Reason: Volitional Pragmatism and the Meaning of Economic Institutions, (Princeton University Press, 2006); Vulnerable People, Vulnerable States: Redefining the Development Challenge, (with Glen Anderson), (Routledge, 2012).*

**Plenary Session 1: Environment-Society Relationships Changing Behaviour or Changing Values ?**

**(Chair: Begüm Özkaynak)**

**Auditorium (MACC's Building)**

**19 June 2013 - 9:00 – 10:30 am**

9:00 am: **Michel Capron** (Emeritus Professor of Management, Université Paris VIII, Chairman of RIODD, France), *The Emancipation and Autonomy of Humanity: Are they Always Liberating Utopia?*

9:45 am: **Andrew Dobson** (Professor of Political Science, University of Keele, United Kingdom), *Environmental policy-making and behaviour change: Financial incentives, 'nudge' or citizenship?*

## The emancipation and autonomy of humanity: Are they always liberating utopia?

In the great movement of emancipation and autonomy of humanity, the consumerism dream and the mirage of unlimited growth have not made people freer. Crises have shaken the socio-economic systems and reshaped social classifications. The working class, supposed to carry the hope of profound social change, has lost its Promethean vocation to fall back on the defense of its own survival. More than ever people seem powerless to master their destiny in the face of economic internationalized and financialized powers which do not have any other motivation and other horizon but endless material accumulation. Bureaucratic economic organizations with gigantic size have distorted the spirit of entrepreneurship and individual and collective initiative that characterizes the human species. But the advanced degradation of natural resources and the exacerbation of social inequalities on the planet for which economic activities are mainly responsible are not inevitable and uncontrollable phenomenon. Through a few current examples, the presentation will attempt to emphasize the stakes of the unification of social criticism on one hand and ecological criticism on the other as the matrix for the conception of a new liberating utopia.

---

*Michel Capron is Doctor, HDR (entitled to lead research) in management science; Professor Emeritus, researcher at the Institut de Recherche en Gestion, Paris-East University at Créteil. Over the fifteen years, Michel Capron has carried out most of his research on corporate social responsibility and sustainable development. He has published numerous papers on these topics and several books (with Françoise Quairel-Lanoizelée). He was a member of the French delegation for ISO 26000 elaboration. Currently Chairman of the International Network of Research on Organizations and Sustainable Development (RIODD) and Chairman of the French Citizen Forum for CSR.*

## Environmental Policy-making and Behaviour Change: Financial Incentives, 'Nudge' or Citizenship?

Given their generalised commitment to 'sustainable development', governments around the world are looking for ways to change people's environment-related behaviour. In recent times, and in the context of the increasing delegitimisation of the state and the turn to privatised solutions to public policy problems, attention has turned from the way in which people's decision-making is structured by their macro-context to individual-level prompts that can influence behaviour. In the environmental context (and indeed in others) this has taken two forms. First, we have witnessed the creation of a suite of environmental incentives and disincentives (rewards and punishments) which are designed to alter people's behavioural patterns in line with the self-interested rational actor model of behaviour. Second, increasing attention has been paid to the potential of behavioural economics – or what has been popularised as 'nudge', after the eponymous book by Cass Sunstein and Richard Thaler. This presentation will outline the nature of both these policy tools, offer examples of them, and discuss their advantages and disadvantages. I will then compare these 'value-lite' approaches with one which draws on the idea of environmental citizenship, rooted in a, ethical and practical commitment to justice.

---

*Andrew Dobson is Professor of Politics at Keele University. He is the author of *Green Political Thought* (4th edition, 2006), and of *Citizenship and the Environment* (OUP 2003), among many other edited books, monographs, and papers. He is Principal Investigator on a 2011-2013 funded project called 'Reducing Energy Consumption Through Community Knowledge Networks' (<http://www.esci.keele.ac.uk/recckn>), and has just completed a 2-year funded seminar series on Biosecurity (<http://www.bbk.ac.uk/environment/biosecurity/index.htm>)*

*He is also a Leverhulme Research Fellow (2011-2013), writing a book on *Listening for Democracy*, which is due for publication by Oxford University Press in 2014. He is a member of the England and Wales Green Party and has stood in Parliamentary and local elections. He co-wrote the Green Party Manifesto in 2010, and is a founder member of the thinktank Green House (<http://www.greenhousethinktank.org>).*

**Plenary Session 2: Rethinking the Role of Science in Society (Chair: Sigrid Stagl)**

**Auditorium (MACC's Building)**

***20 June, 2013 - 9:00 – 10:30 am***

9:00 am: **Sybille van den Hove** (MEDIAN & Visiting Professor at the Institute of Environmental Science and Technology - ICTA - Autonomous University of Barcelona, Spain), *Science, Innovation and Sustainability: Exploring Myths and Asymmetries.*

9:45 am: **Andrew Stirling** (Professor of Science and Technology Policy, SPRU, The Sussex Energy Group, University of Sussex, United Kingdom), *Opening Up Green Transitions. Acknowledging the Politics of Ecologies, Economies and Technologies.*

## Science, Innovation and Sustainability:

### Exploring Myths and Asymmetries

In our efforts to foster the transformations needed to address sustainability challenges, a reflexion on the roles of science, innovation and precaution is central. A series of pervasive myths still underlie currently dominant visions of science and innovation, including in particular the myth of the possibility to fully understand, describe and control complex systems; the myth that uncertainty is always reducible or quantifiable; the myth of deterministic science; and the myth that technology can 'solve it all'. There are also a series of asymmetries often not accounted for in our ways of dealing with evidence in support of policies and action, including the fundamental ones between the three pillars of sustainability; asymmetries in the weighing up of pros and cons and costs and benefits; or the asymmetry in the levels of evidence for 'proof' of harm vs. those for 'proof' of safety required by proponents of a technology. Building in particular on collective work done in the framework of the *Late Lessons from Early Warnings* project of the European Environment Agency, this presentation will explore such myths and asymmetries and reflect on the nature and purposes of the scientific and technological enterprises in today's context, leading to some conclusions about the governance of innovation and innovations in governance.

---

*Sybille van den Hove is Director of MEDIAN, a small research, teaching and consulting company, and Visiting Professor at the Institute for Environmental Science and Technology (ICTA) of the Autonomous University of Barcelona. Her background is high-energy physics and ecological economics.*

*Sybille's work focuses on environmental governance; science-policy interfaces; decision-making and policy formation under conditions of complexity; integration of natural and social sciences; environmental research strategies; and environmental strategies of corporations. Today, she mainly works in the areas of biodiversity governance at international and EU levels, socioeconomic aspects of biodiversity change, nuclear governance in a post-Fukushima world, and corporate transformation towards sustainability. She has also worked in areas such as: climate change, radioactive waste management policies, and the EU chemical and pesticides policies. She is chairing the Scientific Committee of the European Environment Agency.*

## Opening up Green Transitions: Acknowledging the Politics of Ecologies, Economies and Technologies

The challenges of global Sustainability are on an unprecedented scale. So urgent are the imperatives and hard the constraints, that there seems little scope for discussion of choice. Inertia and entrenched interests are so powerful and obstructive, that it is tempting to invoke technical expertise as if it were unquestionable. Acknowledgements of uncertainty or ambiguity appear as signs of weakness. The scientific and moral stakes are so stark, they seem to leave no room for no alternatives. So, do we hear repeated reference to the Sustainability Transition – as if this were singular and self-evident. In this light, democracy and deliberation may seem inconvenient luxuries, threatening only to slow down a self-evident direction for change. Yet these tendencies miss the point – and threaten the core – of Sustainability. Serious solutions are profoundly dependent on – and reinforcing of – inclusive, deliberative democracy. Far from being inevitably weak and slow, these can offer more rapid and effective co-ordination. Openly acknowledging uncertainty and ambiguity can de-fuse the technocratic juggernaut of an apparently choiceless ‘science-based’, ‘pro-innovation’, ‘knowledge-driven’ economy. Indeed – for the first time since the ‘European Enlightenment’ – Sustainability discourse offers the possibility of enabling the collective steering of the directions (not just the pace or impact) of scientific, technological and institutional progress. Real hopes for truly progressive transformation, rest in celebrating diversity and dissent in a vigorous, plural politics of Sustainability.

---

*Andy Stirling is an interdisciplinary researcher at SPRU, where he codirects the STEPS Centre and Sustainable Lifestyles Research Group.*

*Focusing on challenges around ‘opening up’ more democratic governance of knowledge, research science, technology and innovation, his work addresses issues like: uncertainty, precaution, skepticism, sustainability, resilience, diversity, transformation, progress, participation and power. Andy has served on advisory bodies for the EU on Energy Policy, Science in Society, Collaborative Research, Sustainability and Science Governance; for the UK government on toxic substances, GM crops, public engagement and science advice; and working groups of the Royal Society, Nuffield Council, UN IHDP, Global Energy Observatory, Demos and the Green Alliance. He’s served on boards for several journals, Greenpeace International, Greenpeace UK and on the Research Committee of the ESRC.*

## **Roundtable : The Institutionalization of Ecological Economics - Cross-Continental Dialogue**

**(Moderator: Tom Bauler)**

**Auditorium (MACC's Building)**

***20 June, 2013 - 4:00 – 5:30 pm***

### **Panelists :**

- Richard Howarth, Prof. of Environmental Studies, (Dartmouth College, USA), Editor-in-Chief of Ecological Economics.
- Clive Spash, Prof., Chair of Public Policy and Governance, Department of Socio-Economics (WU Vienna - University of Economics and Business, AT). Editor-in-Chief of Environmental Values. Former President of the European Society for Ecological Economics (ESEE).
- Inge Røpke, Prof., Department of Development and Planning (Aalborg University, Dk)

### **Moderator:**

Tom Bauler, Assist.Prof., Université Libre de Bruxelles (BE) & Harvard University (USA).

### **Rationale**

As a research field, Ecological Economics has the ambition to demarcate itself in a number of its principles from more orthodox economic approaches when enquiring the Man-Nature relationships. It can be taken as a mark of a healthy, self-reflective research community that this demarcation work does also operate inside of the research field itself. Controversies and structural discussions are not rare within the field, and interpretations of what questions to work on and how to encounter them are diversified. Partially, the positions taken by one or the other are influenced by the importance, positions and roles given to science in different societal contexts. Partially, different practices of environmental governance, politics and policies co-influence the manner the members of our community can investigate our research field and how the research field itself can and wants to position itself in the Science-Policy nexus. The roundtable will explore the evolution and institutionalization of Ecological Economics, as a research field and a community of scientists, and will do so with a specific comparative focus on understanding the diverse dynamics of institutionalization of the field - and its members - in Europe and the United States of America. The objective is double: provide an insight into what works differently, and into what shared lessons can be drawn at the 25<sup>th</sup> anniversary of the creation of ISEE.

**Plenary Session 3: Redefining Prosperity (Chair: Roldan Muradian)**

**Auditorium (MACC's Building)**

***21 June, 2013 - 9:00 – 10:30 am***

9:00 am: **Florence Jany-Catrice** (Professor of Economics, CLERSE, Université Lille1, France), *Redefining progress and prosperity: with which indicators ?*

9:45 am: **Tim Jackson** (Professor of Sustainable Development, Center for Environmental Strategy, University of Surrey, United Kingdom), *Prosperity and Equity in the 'Green Economy'*.

## Redefining progress and prosperity: with which indicators?

For more than twenty years now, there has been a large dispersed movement toward the development of new indicators of wealth or prosperity, to complement GDP and growth, or to replace them. This movement can be read as an expression of a growing protest vis-à-vis the macroeconomic indicators when used as univocal representation of prosperity or progress.

If initiatives are multiplying to provide other indicators, they are also very diverse in the content of what they offer, and in the methods to achieve the aim followed. They are the expression of highly contrasting visions of this new prosperity to which it would be useful to converge.

The purpose of this conference is to provide a discussion of the plurality of objectives behind this movement, in the light of some recent initiatives, being they at an international level (UNDP new challenges toward sustainability) or at national and even territorial levels.

*Florence Jany-Catrice is an economist. Professor at the University Lille1, she is a researcher at the Clersé (Centre Lillois d'études et de recherches économiques et sociologique)-UMR-CNRS 8019, and a member of the Institut Universitaire de France (IUF).*

*Her researches concern mainly the economy of quality: quality of labor and employment; quality of output, wealth and their measures. She published numerous articles and books, among which *The new indicators of wealth and development* (Palgrave MacMillan) 2006, with J. Gadrey; *Les services à la personne* (2009, with FX.Devetter and T. Ribault) (La Découverte). Her last book is untitled *La performance totale: nouvel esprit du capitalisme?* (2012, Presses universitaires du Septentrion).*

*She is also the Director of a French academic Review: *Revue française de socio-économie*, and an active member of the French Association of Political Economy (Afep/FAPE).*

## Prosperity and equity in the 'green economy'

An ecologically-constrained economy calls for a vision of prosperity consistent with social justice. It also demands new models of enterprise, a coherent strategy for employment, long-term investment in real physical, social and natural assets and a finance system fit for purpose to deliver these things. This talk will establish the foundations for such a vision and explore in particular the implications for transforming the financial system. Drawing on insights from recent work on ecological macro-economics, the presentation talk will highlight some of the resonances between the demands of sustainability and the need for financial reform.

---

*Tim Jackson is Professor of Sustainable Development at the University of Surrey and Director of the Sustainable Lifestyles Research Group – a multi-disciplinary research group funded by the UK government, which explores the complex links between people's lifestyles, societal values and sustainability. From 2004 to 2011 Tim was Economics Commissioner on the UK Sustainable Development Commission, where his work culminated in the publication of the controversial book *Prosperity without Growth – economics for a finite planet* (Earthscan 2009). In 2013 he was awarded a three year Professorial Fellowship to study *Prosperity and Sustainability in the Green Economy* (PASSAGE). In addition to his academic work, Tim is an award-winning dramatist with numerous radio writing credits for the BBC.*

**Closing Plenary: Towards a Socio-Ecological Transition (Chair: Timothy J. Foxon)**

**Auditorium (MACC's Building)**

**21 June, 2013 - 3:00 – 4:00 pm**

3:00 pm: **Elizabeth Shove** (Professor of Sociology, University of Lancaster, United Kingdom), *The Dynamics of Energy and Mobility Demand*.

**The dynamics of energy and mobility demand**

This talk begins by considering different methods of conceptualising the demand for energy and mobility. The suggestion that such demand is an outcome of changing social practices underlines the significance of linking social and historical research to that which deals with the provision and management of energy and mobility systems. A focus on what energy is used for in contemporary society – that is, of which practices is energy consumption a part – forces us to think differently about long term energy 'needs' and how they might be established and changed. I will outline different lines of research designed in response to this agenda.

*Elizabeth Shove is Professor of Sociology at Lancaster University. She has recently completed an ESRC funded fellowship, "Transitions in Practice: Climate Change and Everyday life, she is a member of the Sustainable Practices Research Group, and is about to become co-director of DEMAND, a five year research centre dealing with the dynamics of energy and mobility demand starting in 2013. She is author of "Comfort, Cleanliness and Convenience: the social organization of normality" (Berg 2003). More recent books include "The Dynamics of Social Practice" with Mika Pantzar and Matt Watson (Sage 2012) and "Sustainable practices: social theory and climate change", edited with Nicola Spurling (Routledge 2013).*
